

 AI FOR GOOD — HACKATHON 1

Ready for School with Beaver

A playful, AI-powered 10-minute daily learning companion preparing children aged 3–5 for school success at home.

Tool: Bolt.new | Goal: SDG 4 Quality Education

The SDG 4 Early Education Gap

PROBLEM DEFINITION

The Transition Challenge

The Issue: Over 40% of preschool children enter primary education lacking basic cognitive, emotional, and social readiness skills.

Target Need: Parents lack affordable, structured, and non-overwhelming tools at home to build confidence in young learners before day one.

SDG 4.2 Alignment: Ensuring all girls and boys have access to quality early childhood development & pre-primary education.

Target User Group & Approach

10

Minutes Daily Habit

USER PROFILE

Who We Are Building For

Primary Users: Children aged 3 to 5 and their parents seeking guided, fun school preparation, (People can speak English, Dutch, German, French, Spanish, Turkish, Arabic & Russian).

User Needs: Short attention span management, bite-sized interactive tasks, and encouraging gamified feedback.

Explicitly Left out: Unsupervised children, households without internet-enabled smart devices

AI Solution with Beaver

THE SOLUTION

Adaptive Learning Companion

Built completely on **Lovable**, our web app turns early education into interactive, AI-generated daily moments guided by Beaver the mascot.

Why AI is Crucial: Unlike static video lessons or paper books, our AI dynamically generates personalized micro-tasks and quizzes tailored to each child's current level.

Core Features & Value

10-Min Activities

Bite-sized daily challenges covering literacy, counting, and social readiness tailored for short attention spans.

AI Quizzes

Dynamic quiz engine that adjusts difficulty based on child responses to maintain engagement without frustration.

Parent Progress

Real-time progress tracker helping parents observe growth areas and celebrate milestones before school starts.

How the Prototype Works

-  **Step 1: Input & Onboarding** -> Parent selects the child's age group (3, 4, or 5 years) and sets daily focus areas (e.g., Numbers, Phonics, Routines).
-  **Step 2: AI Engagement** -> The system processes target skill sets and retrieves adaptive interactive tasks using real-time prompt generation.
-  **Step 3: Interactive Output** -> The child completes fun games with Beaver, receiving positive audio-visual reinforcement and instant scoring.

Ethical Considerations

Screen Time & Overuse

Risk: Excessive digital screen exposure for children aged 3–5.

Recommendation: Enforced 10-minute session caps per day, encouraging children to finish and move to offline physical play.

Inclusion & Bias

Risk: Digital divide excludes toddlers without devices or high-speed internet.

Recommendation: Light-weight website design optimized for low-bandwidth devices and mobile browsers.

 LIVE DEMO TIME

Ready for School?

Let's test the prototype live and see Beaver in action!
